## SMOOTH TREAD

Smooth Tread avoids damaging the turf at any point. Allows the mower to glide over the surface without compacting or otherwise damaging the surface. Ideal for when uniform, undisturbed surfaces are necessary i.e. golf courses and fine lawns.

## KNOBBLY GRIP

Provides excellent traction with less aggression and damage to the turf.

## TURF TREAD

Provides good traction without damaging your grass.

## SUPER GRIP

Offers increased traction combined with a low profile and is typically used on professional riding mowers where hillside traction is desired regardless of the terrain.

## TURF PRO

Provides longer tread life with minimal turf wear, offers all-around performance and manoeuvrability with a balanced profile and tread depth.

## TRACTOR GRIP

Provides traction by allowing the lugs to push against the turf. These are particularly useful in slippery, swampy, muddy areas and steep slopes. Deep lugs give excellent traction regardless of the terrain.
